

BERSBO

Where the impossible is made possible

Föreningen Bersbo koppargruvor (The Association Bersbo copper mines) works with the aim of saving and preserving the remains of the Bersbo mining village and create a place where visitors love to come

A very important goal in this effort is to save the beautiful building, the mine headframe, over the minehole called the Adelswårds shaft

You or your company can make it possible!!

Föreningen Bersbo koppargruvor has applied for funding of the restoration of the mine headframe from different authorities and from EU. We now have positive indications that funding might actually be granted! The final decision will be made in september. The decision is dependent on us raising funds ourselves to cover 10% of the cost. That is why we already now are searching for sponsors who can sign a promise of financial contribution to be given once the project starts and the project of restoring the building is actually becoming

a reality
